Journal of Applied Testing Preprints Policy

The Journal of Applied Testing Technology (JATT) will consider for review articles previously available as preprints. Authors are requested to update any pre-publication versions with a link to the final published article. Authors may also post the final published version of the article immediately after publication.

Licensing implications

Authors should not assign copyright during the preprint process; authors should retain copyright in their work when posting to a preprint server.

Preferably, authors should only grant "no re-use" licenses to their preprints. However, JATT will consider for publication submissions that have previously been assigned CC-BY (-NC/-NC-ND) as preprints. If a preprint has been posted under a CC license, it is still possible to publish in the journal under a standard Copyright Transfer Agreement (CTA) or an Exclusive License Agreement (ELA).

Implications for citation practices

JATT encourages researchers and academics who reference preprints (like other peer reviewed and non-peer reviewed sources) to continue to cite these sources accurately.

Researchers can search preprint servers that are easily found using scholarly search engines or that are recognized and well-established.

If a preprint is assigned a DOI, JATT will assign a new DOI to the accepted article and can optionally link to the preprint. Note that the preprint publisher must link to the published article, per CrossRef: "[Posted content] consists of preprints, eprints, working papers, reports, dissertations, and many other types of content that has been posted but not formally published… Once a journal article (or book, conference paper, etc.) has been published from the posted content and a DOI has been assigned, the posted content publisher will update their metadata to associate the posted content with the DOI of the accepted manuscript (AM) or version of record (VOR)."
